ONE DAY NATIONAL SEMINAR ON

“*IN SILICO* RESEARCH TOWARDS IDENTIFICATION OF NOVEL TARGETS IN VARIOUS AILMENTS”

Dr. Rajiv Jash elaborated that *in silico* drug design is the study to identify, develop, analyze, optimize drugs or biologically cum pharmaceutically active compounds by using computerized software programs as well web servers. The term 'in silico' refers to computational models that investigate pharmacological hypotheses using methods such as databases, data analysis tools, data mining, homology models, machine learning, pharmacophores, quantitative structure-activity. Dr. Rajiv Jash has highlighted that *in silico* methodologies have opened new avenues of research and have now been widely accepted as a useful tool for shortening lead times, understanding and predicting drug ability in early drug discovery. Molecular docking can be used to predict how receptor protein interacts with bioactive compounds (ligands).
