**6.5.1 Internal Quality Assurance Cell (IQAC) has contributed significantly for institutionalizing the quality assurance strategies and processes. It reviews teaching learning process, structures & methodologies of operations and learning outcomes at periodic intervals and records the incremental improvement in various activities**

**Response:**

The academic development of the committee was monitored by PAC-IRB from the start of the institution and it successfully conducted various skill orientation programs, FDPs etc to enhance the quality of education in the institution. The committee also played a vital role in the establishment of E-Cell, R&D Cell, Institution Innovation Cell (IIC) and Intellectual Property Rights (IPR) etc.

Internal Quality Assurance Cell (IQAC) was established in the year 2019 with the aim of improving and maintaining the quality of education further. The prime objective of the IQAC is to evolve a system for conscious and consistent enhancement of the performance of the institution.

**IQAC shall evolve mechanisms and procedures for**

1. Ensuring timely, efficient and progressive performance of academic tasks
2. The relevance and quality of academic and research programmes.
3. Optimization and integration of modern methods of teaching and learning.
4. The credibility of evaluation procedures.
5. Ensuring the adequacy, maintenance and proper allocation of support structure and services.
6. Sharing of research findings.
7. Admission Quality.
8. Student Profile.
9. Placement Quality.
10. Higher Studies.
11. Feedback Analysis.
12. Result Analysis.

## A Glimpse on one week virtual International FDP form 27.07.2020 to 01.08.2020

### Nano area in medicine and Pharmaceuticals

**Nano-medicine:** It represents an emerging field where the sizes of the drug or a therapeutic delivery system work at the Nano scale. In the pharmaceutical industry, a long-standing issue is the difficulty of delivering the appropriate dose of active agents to specific disease sites.

**Tissue Engineering:** For tissue engineering, nanotechnology has also opened doors to new approaches that could stimulate the reconstruction of complex tissue architectures.

**Nano-robots:** Nanorobots are devices that will be used for the purpose of maintaining and protecting the human body against pathogens. They will have a diameter of about 0.5 to 3 microns and will be constructed out of parts with dimensions in the range of 1 to 100 nanometers.
