SKILL DEVELOPMENT ON EXPERIMENTAL PHARMACOLOGY

12.08.2022 to 30.08.2022

Day 1-2 : CPCSEA GUIDELINES

DETAILED ACTIVITIES

DAY 1-2

- ❖ It included the information that experimentation on animals in course of medical research and education is covered by provisions of the Prevention of Cruelty to Animals Act, 1960 and Breeding of and Experiments on Animals (Control & Supervision) Rules of 1998, 2001, and 2006 framed under the Act.
- ❖ These are enforced by the Committee for Control and Supervision of Experiments on Animals (CPCSEA), a statutory body under the Prevention of Cruelty to Animals Act, 1960. Under these provisions, the concerned establishments are required to register themselves with CPCSEA, form IAEC, get their Animal House Facilities inspected, and get specific projects for research cleared by CPCSEA before commencing the research on animals.
- ❖ Further, breeding and trade of animals for such experimentation are also regulated under these Rules.
- ❖ In an amendment brought out in 2006 in the Rules for Breeding of and Experiments on Animals (Control & Supervision), powers to permit small animal experiments were given to the establishment's Institutional Animal Ethics Committee (IAEC)

DAY 3-5

- ❖ Only proposals for conducting experiments on large animals are required to be sent to CPCSEA for approval. Accordingly, all the IAEC members must be fully aware of the extant rules and guidelines. It may be noted that approvals given by IAEC's which are not in accordance with the extant rules are invalid
- ❖ This document is a step to apprise the IAEC members about the rules and guidelines and provides a compilation of the same and would serve as an important document for all IAEC.
- ❖ It also describes the objectives, role of IAEC, formation, a procedure in which the meeting is to be conducted, and other relevant information like decision making, reporting, record keeping, etc.

DAY 6-9

Animals are used in pharmacology for the following:

- ❖ Undergraduate teaching to demonstrate the effects of various drugs.
- ❖ Typical experiments include the effect of drugs on rabbit intestine, rabbit eye, central nervous system, reproductive system, as also frog heart, and frog rectus. The latter has however declined to owe to the ban on the use of frogs.
- ❖ Postgraduate teaching to demonstrate the effects of various drugs, to determine the nature of an unknown drug for bioassay, and screening methods, and to learn skills e.g., administering drugs.

DAY 10-11

- ❖ Animals have been used and are still permitted for screening for drugs, in bioassay and for preclinical testing including general and specific toxicity studies. This preclinical safety and efficacy data are needed for submission to drug regulatory authorities before permission for further studies in humans is granted.

DAY 12-13

- ❖ A larger number and a greater variety of animals are used in pure research than in applied research. This usually involves studies on embryogenesis, developmental biology, behavior, and breeding in Fruit flies, nematodes, mice, and rats. Applied research that aims to answer specific questions is usually carried out in the pharmaceutical industry or by universities,
- ❖ Animal models of disease, discovered or generated by pure research programs, are used for applied research. Examples include the use of transgenic animals, animal models of naturally occurring diseases, induced animal models of human diseases, cosmetic testing, and toxicity studies.

DAY 14-15

- ❖ Ex Pharm is a computer-assisted learning package containing various programs which simulate animal experiments in Pharmacology. These programs can be used to demonstrate drugs on different animal systems. The package is user-friendly, highly interactive, and full of animated sequences that make simulation appear realistic.

Date 21-01-2022 & 22-01-2022 & 23-01-2022: theoretical explanation, Handling FT-IR, and interpretation of IR spectrum

Ms. T S Mrinalini, Assistant professor, Dept. of Pharmaceutical Analysis, Kvsrscops took charge in explaining FT-IR theory, software learning, sample analysis, applications. The theory involved in the InfraRed radiation sources and the concept of wave number, different vibrational modes in IR region, the FI-IR working principle were explained.

Instrumentation of FT-IR in our college it is made of BRUKER and model Alpha-II with OPUS software. Different sampling techniques like pressed pellet technique, ATR Attenuated total internal reflection for solid, fluid, and polymer analysis, solid samples with KBR and the liquid sample analysis were done. Opus soft ware operation, the sample analysis, integration, internal qualification of the system and maintenance of the instrument were explained.

Date 24-01-2022 & 25-01-2022: Refractometer and Nephelo-turbidity meter

Refractometer theory, instrumentation and sample analysis were done on day 6. The theory of refraction of light, refraction for different media, Snell's law, refractive index calculations, standard refractive index values were learned. Refractometer of make Systronics with different lens is shown. The sample analysis by applying amino acids and other plant samples were identified using refractometer. Later Nephelo-turbidity meter was explained. Here the concept of light scattering and light transmission was explained. In nephelometer the light scattering was measured and it is in 90 to the light passing from the sample and source where in turbidity meter the light transmitted was measured which is 180 angles to the emitted light. Nephelometer is used for the determination of low viscous and dilute solutions while the turbidity meter is used for the measurement of highly viscous and turbid solutions.

Date 27-01-2022: Spectrofluorometer and flame photo meter

Fluorescence, phosphorescence, and the theory of electronic transitions and the instrumentation of fluorimetry, the factors effecting fluorescence and the sample analysis were explained and applied in the instrument. fluorescent compounds, quenching of the fluorescence and the sample quinine analysis is done using fluorimetry.

Flame photometry, the theory behind it, intensity of flame, the change in the flame color due to presence of metal ions in different concentrations. Software learning and the sample analysis by estimating the concentration of unknown sample by calibration curve method against the known standard solutions.

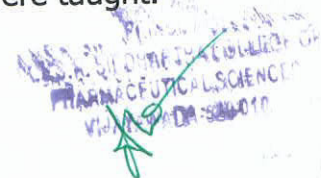

a speech about the need for the research blessing the students for the bright future

Date 28-01-2022: HPLC training

Dr M Vijayalakshmi, Associate professor, Dept of pharmaceutical analysis explained HPLC of make Shimadzu and model SPD 10A UP, With software LC Solutions. Theory involved in the HPLC were explained in detail with PPT presentation.

Concept of Adsorption and partition, isocratic elution and gradient elution modes, normal phase and reverse phase theory, and instrumentation involved in the HPLC were explained.

Pumping systems and types like pneumatic pumps, syringe type pumps, reciprocating pumps, and piston pumps were explained. Different types of mobile phases to be used. Selection of mobile phase composition based on polarity of solvent, selection of buffer and buffer pH based on sample pKa were clearly explained. Different types of injectors and different types of detectors like UV-VIS, Fluorescence, refractive index detector, elsd, conductivity detectors, mass spectroscopic detectors were taught.

Date 29-01-2022 and 30-01-2022: HPLC training

Handling of HPLC, its maintenance techniques were first taught as the system is highly expensive and should be carefully maintained. Practical approach is carried by doing calibration of HPLC for various parameters like wavelength, run time, column temperature and pumping system etc. late calibration is done by using caffeine as a drug. Late sample analysis with paracetamol is shown. The integration of the chromatogram and the various parameters like retention time, theoretical plate, tailing factor, standard deviation calculation, %RSD calculations, mean, Y-Intercept concepts were explained.

Trouble shooting for HPLC is also explained which covered the filtration of the mobile phase and sample solutions, the seal wash and the needle wash, pressure maintenance, purging with hot water about 60 C to wash out all the salts and remains in pump.

Washing the channels with magic solution which is combination of Acetonitrile, methanol, and IPA.

Date 31-01-2022: valedictory function

The workshop got very good response. The valedictory function was inaugurated by the principal & Head Dept. of Pharmaceutical Analysis Dr. G. Devala Rao and as a chief guest he also made he distributed the certificates for the students who shown best performance in the training considering the attendance and the results of the exams conducted on the training. Post training feedback was obtained from the participants.

An analysis of the responses highlighted that 87% of the participants felt that the overall program was excellent, 13% of them said it was very good. 100% of participants felt the workshop met their needs in an excellent / very good manner. Participants wished to have adequate time for in-depth into the above mentioned.
