Instrumentation of FT-IR in our college it is made of BRUKER and model Alpha-II with OPUS software. Different sampling techniques like pressed pellet technique, ATR Attenuated total internal reflection for solid, fluid, and polymer analysis, solid samples with KBR and the liquid sample analysis were done. Opus soft ware operation, the sample analysis, integration, internal qualification of the system and maintenance of the instrument were explained.

Date 04-02-2021 & 05-02-2021: HPLC theoretical training

Dr. G. Devala Rao principal & Head Dept. of Pharmaceutical Analysis explained HPLC of make Shimadzu and model SPD 10A UP, With software LC Solutions. Theory involved in the HPLC were explained in detail with PPT presentation.

Concept of Adsorption and partition, isocratic elution and gradient elution modes, normal phase and reverse phase theory, and instrumentation involved in the HPLC were explained.

Pumping systems and types like pneumatic pumps, syringe type pumps, reciprocating pumps, and piston pumps were explained. Different types of mobile phases to be used. Selection of mobile phase composition based on polarity of solvent, selection of buffer and buffer pH based on sample pKa were clearly explained. Different types of injectors and different types of detectors like UV-VIS, Fluorescence, refractive index detector, elsd, conductivity detectors, mass spectroscopic detectors were taught.

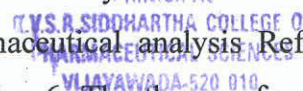

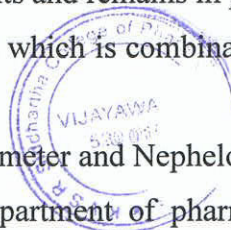

Date 06-02-2021, 08-02-2021, 09-02-2021: HPLC practical approach

Practical approach is carried by doing calibration of HPLC for various parameters like wavelength, run time, column temperature and pumping system etc. late calibration is done by using caffeine as a drug. Late sample analysis with paracetamol is shown. The integration of the chromatogram and the various parameters like retention time, theoretical plate, tailing factor, standard deviation calculation, %RSD calculations, mean, Y-Intercept concepts were explained. Trouble shooting for HPLC is also explained which covered the filtration of the mobile phase and sample solutions, the seal wash and the needle wash, pressure maintenance, purging with hot water about 60 C to wash out all the salts and remains in pump.

Washing the channels with magic solution which is combination of Acetonitrile, methanol, and IPA.

Date 10-02-2021 & 11-02-2021: Refractometer and Nephelo-turbidity meter

Mrs. V Anusha, Assistant Professor, Department of pharmaceutical analysis Refractometer theory, instrumentation and sample analysis were done on day 6. The theory of refraction of

light, refraction for different media, Snell's law, refractive index calculations, standard refractive index values were learned. Refractometer of make Systronics with different lens is shown. The sample analysis by applying amino acids and other plant samples were identified using refractometer. Later Nephelo-turbidity meter was explained. Here the concept of light scattering and light transmission was explained. In nephelometer the light scattering was measured and it is in 90 to the light passing from the sample and source where in turbidity meter the light transmitted was measured which is 180 angles to the emitted light. Nephelometer is used for the determination of low viscous and dilute solutions while the turbidity meter is used for the measurement of highly viscous and turbid solutions.

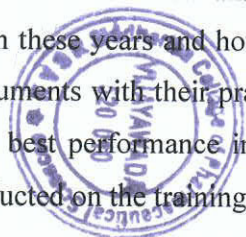

Date 12-02-2021 & 13-02-2021: spectrofluorometer and flame photo meter

Ms. T S Mrinalini, Assistant professor, Dept. of Pharmaceutical Analysis, Kvsrscops explained Fluorescence, phosphorescence, and the theory of electronic transitions and the instrumentation of fluorimetry, the factors effecting fluorescence and the sample analysis were explained and applied in the instrument. fluorescent compounds, quenching of the fluorescence and the sample quinine analysis is done using fluorimetry.

Flame photometry, the theory behind it, intensity of flame, the change in the fame color due to presence of metal ions in different concentrations. Software learning and the sample analysis by estimating the concentration of unknown sample by calibration curve method against the known standard solutions.

Date 15-02-2021: valedictory function

The workshop got very good response. The valedictory function was inaugurated by **Dr. A. Suneetha** HOD, Department of pharmaceutical analysis, Hindu college of pharmacy as a chief guest made a speech about the need for the research blessing the students for the bright future. She addressed about the need of chemical analysis of new products and the advances analytical instruments have made in these years and how much important it is to correlate the theoretical knowledge of these instruments with their practical handling she distributed the certificates for the students who shown best performance in the training considering the attendance and the results of the exams conducted on the training.

PROGRAMME SCHEDULE

DAY 1-2: PHARMACOLOGY OF DRUGS USED TO TREAT COVID

The FDA has authorized certain antiviral medications and monoclonal antibodies to treat mild to moderate COVID-19 in people who are more likely to get very sick.

Antiviral treatments target specific parts of the virus to stop it from multiplying in the body, helping to prevent severe illness and death.

Monoclonal antibodies help the immune system recognize and respond more effectively to the virus

The National Institutes of Health (NIH) provides COVID-19 Treatment Guidelines for healthcare providers to help them work with their patients and determine the best treatment options for them. Several options are available for treating COVID-19 at home or in an outpatient setting. They include: NIRMATELVIR with RITONAVI, REMEDSVIR, BEBTILOVIMAB, MOLNUPIRAVIR. The FDA has issued an EUA for tixagevimab plus cilgavimab (Evusheld), a medicine used in adults and children ages 12 years and older. Evusheld consists of 2 monoclonal antibodies provided together to help prevent infection with the virus that causes COVID-19.

DAY 3-5: USAGE OF HERBAL DRUGS FOR TREATMENT OF COVID

Herbal medicines have also helped to alleviate the effects of infectious diseases such as SARS-CoV-2. Evidence supports that herbal medicine may be effective in reducing and managing the risk of COVID-19. The use of herbal medicine as an alternative remedy for COVID-19 in combination with modern medicine, and has released several recommendations on herbal therapy. Since many botanical drugs show antiviral efficacy, the use of herbal medicine for therapeutic purposes should not be underestimated. Currently, well-known herbal medicines with antiviral activities are being used as an additional treatment to suppress SARS-CoV-2, since conventional treatments are still not well succeeded.

In the research of herbal medicine single plant species have much medicinal value. It is now well understood that a single plant may contain a wide range of biochemicals, making that study the pharmacologic value of plants is challenged. Generally classified as antiviral, anti-inflammatory, immunomodulatory, and mixed-effects having more than one purpose based on valuable evidence for efficacy. On top of exhibiting direct antiviral effects, herbal drugs with reported anti-inflammatory activities may have significant roles in COVID-19 treatment as the elevation of inflammatory indicators such as interleukin (IL)-6, erythrocyte sedimentation rate (ESR), and C-reactive protein (CRP) has been related to severe disease with worse outcomes,

PHARMACEUTICAL SCIENCES

most likely related to cytokine storm. Some examples of herbal medicine used in the management of COVID-19 are summarized such as *Malva sylvestris*L. *Salvia officinalis*L. Etc

DAY 6-7: DRUG REPURPOSING

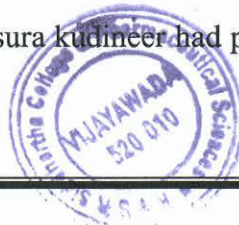

Drug repurposing (also called drug repositioning, reprofiling or re-tasking) is a strategy for identifying new uses for approved or investigational drugs that are outside the scope of the original medical indication¹. This strategy offers various advantages over developing an entirely new drug for a given indication.

Agents previously used to treat SARS and MERS are potential candidates to treat COVID-19. Various agents with apparent in vitro activity against SARS-CoV and MERS-CoV were used during the SARS and MERS outbreaks, with inconsistent efficacy. Meta-analyses of SARS and MERS treatment studies found no clear benefit of any specific regimen.^{37,38} Below, the in vitro activity and published clinical experiences of some of the most promising repurposed drugs for COVID-19 are reviewed such as Chloroquine and Hydroxychloroquine, Lopinavir/Ritonavir and Other Antiretrovirals.

DAY 8-11: SIDDHA TREATMENT FOR COVID 19

Siddha system of medicine is one of the traditional systems of medicine prevalent in South India. The classical Siddha system mentions 4448 diseases that are developed by the derangement of three humor (Vali, Azhal, and Aiyam). These diseases are diagnosed by clinical examination and eight-fold examination (*Envagai thervu*) which includes the tools such as *Naa* (Tongue), *Niram* (Colour), *Mozhi* (Speech), *Vizhi* (Eyes), Naadi (Pulse diagnosis) *Sparisam* (Sensation), *Malam* (Stool), *Moothiram* (Urine), etc. and treated with Siddha Sasthric Medicines.

The Siddha drugs selected for the management of COVID-19 depends on its pharmacological action, mentioned in published articles in journals and book references which may help the health professionals and researchers for the patient care. The herbal formulations and its documented pharmacological activity are Kabasura Kudineer The Siddha classical formulation kabasura kudineer chooranam consists of 15 ingredients of herbs "(Zingiber officinale, Piper longum, cerviana, and Vitis vinifera) was studied for antiviral activity by in silico docking analysis.²² The phytochemicals in thontha sura kudineer had promising activity against the

viral spike glycoprotein which prevents the spike proteins binding with host cell receptor. Nilavembu Kudineer (NVK), Vajra Kandi Chenduram Are some other formulations in siddha treatment used to treat covid 19.

DAY 12-13: POST COVID COMPLICATIONS

Post-COVID conditions can include a wide range of ongoing health problems; these conditions can last weeks, months, or longer.

Post-COVID conditions are found more often in people who had severe COVID-19 illness, but anyone who has been infected with the virus that causes COVID-19 can experience post-COVID conditions, even people who had mild illness or no symptoms from COVID-19.

People who are not vaccinated against COVID-19 and become infected might also be at higher risk of developing post-COVID conditions compared to people who were vaccinated and had breakthrough infections.

While most people with post-COVID conditions have evidence of infection or COVID-19 illness, in some cases, a person with post-COVID conditions may not have tested positive for the virus or known they were infected.

DAY 14-15: ENHANCING IMMUNITY BY NATURAL METHODS.

Enhancing the body's natural defence system (immunity) plays an important role in maintaining optimum health.

We all know that prevention is better than cure. While there is no medicine for COVID-19 as of now, it will be good to take preventive measures which boost our immunity in these times.

Ministry of AYUSH recommends the following self-care guidelines for preventive health measures and boosting immunity with special reference to respiratory health. These are supported by Ayurvedic literature and scientific publications.
