Number of students attended: 59

Number of students completed : 55

Venue: Seminar hall , class room No : 401

Objectives of the Program:

- ChemDraw is a chemistry software which help us in many chemical structures.
- Easy conversion of PDB to PDBQT format.
- It is used to perform rigid as well as flexible docking.
- Easy analysis of virtual screening results.

Outcomes of the Programme:

- The In-silico drug design is cost effective in research and development of drugs.
- Can Help In Identifying Drug Targets Via Bioinformatics Tools.

PROGRAMME REPORT

DAY 1-2 : INTRODUCTION TO STATISTICAL PROCESS THINKING

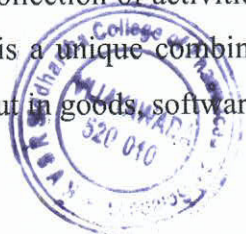

Statistical thinking is commonly used in public health, clinical research and community studies. In biomedical area, the studies usually involve animals or cell lines and the studies typically use the experiments which introduce more challenge for data analysis and statistical method utilization as compared to other areas of studies. Biomedical research, including study planning, experimental design, sample size and power determination, data collection, data analyses and interpretation as well as manuscript preparation, all require statistical support. While utilization of statistical thinking in biomedical and biological research are discussed by several researchers, there are still a lot of misunderstood and misinterpretation of statistical concepts. First, we should know how to perform the experimental design including sample size determination and sample allocation. Then, the appropriate descriptive statistical summaries will be illustrated. Lastly, the most efficient statistical inference test methods will be described.

DAY 3-6 : BASIC STATISTICS USED IN PHARMACOLOGY

Statistics is an important tool in pharmacological research that is used to summarize (descriptive statistics) experimental data in terms of central tendency (mean or median) and variance (standard deviation, standard error of the mean, confidence interval or range) but more importantly it enables us to conduct hypothesis testing. This is of particular importance when attempting to determine whether the pharmacological effect of one drug is superior to another which clearly has implications for drug development. Pharmacology routinely employs statistics to help summarize data and, more importantly, to test hypotheses. This is a relatively simple matter when one is only interested in testing the Null hypothesis that two-sample means are equal ($H_0; \mu_1 = \mu_2$).

DAY 7-8 : STATISTICAL PROCESS CONTROL

Statistical process control as the application of statistical method to the measurement and analysis of variation in a process. This technique applies to both in process parameter and end of process parameters. A process is a collection of activities that converts inputs into outputs or result. More specifically a process is a unique combination of machine, tools, methods, materials and people that attain an output in goods, software or services.

PRINCIPAL
K.V.S.R. SIDDHARTHA COLLEGE OF
PHARMACEUTICAL SCIENCES
VIJAYANAGARA-520 010

PRINCIPLE:

A process that is operating with only chance causes of variation present is said to be in statistical control.

A process that is operating in the presence of assignable causes is said to be out of control.

The eventual goal of SPC is the elimination of variability in process.

DAY 9-10 : PROCESS CAPABILITY STUDY :

Process capability analyses the uniformity of the process.

Measure the parameters of the product rather than the process itself.

Expressed as a process capability index.

GOALS:

Predicts how the process will hold within the tolerance limits

Establish sampling intervals

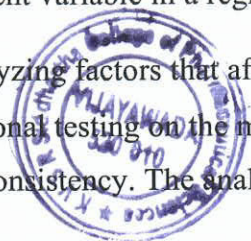

Establish performance requirements for equipment or suppliers

Reduces process variability

DAY 11-12 : ANALYSIS OF VARIANCE ROAD MAP

Analysis of variance (ANOVA) is an analysis tool used in statistics that splits an observed aggregate variability found inside a data set into two parts: systematic factors and random factors. The systematic factors have a statistical influence on the given data set, while the random factors do not. Analysts use the ANOVA test to determine the influence that independent variables have on the dependent variable in a regression study.

The ANOVA test is the initial step in analyzing factors that affect a given data set. Once the test is finished, an analyst performs additional testing on the methodical factors that measurably contribute to the data set's inconsistency. The analyst utilizes the ANOVA test

results in an f-test to generate additional data that aligns with the proposed regression models.

The ANOVA test allows a comparison of more than two groups at the same time to determine whether a relationship exists between them. The result of the ANOVA formula, the F statistic (also called the F-ratio), allows for the analysis of multiple groups of data to determine the variability between samples and within samples.

If no real difference exists between the tested groups, which is called the null hypothesis, the result of the ANOVA's F-ratio statistic will be close to 1. The distribution of all possible values of the F statistic is the F-distribution. This is actually a group of distribution functions, with two characteristic numbers, called the numerator degrees of freedom and the denominator degrees of freedom.

DAY 13- 14 : CORELLATION REGRESSION ANALYSIS

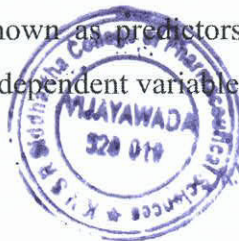

The most commonly used techniques for investigating the relationship between two quantitative variables are correlation and linear regression. Correlation quantifies the strength of the linear relationship between a pair of variables, whereas regression expresses the relationship in the form of an equation.

Correlation Analysis

Correlation analysis is applied in quantifying the association between two continuous variables, for example, an dependent and independent variable or among two independent variables.

Regression Analysis

Regression analysis refers to assessing the relationship between the outcome variable and one or more variables. The outcome variable is known as the dependent or response variable and the risk elements, and co-founders are known as predictors or independent variables. The dependent variable is shown by “y” and independent variables are shown by “x” in regression analysis.

Number of students attended: 84

Venue: Pharmacology lab,

Objective of the program:

To make students gain knowledge on INTRODUCTION TO STATISTICAL ANALYSIS

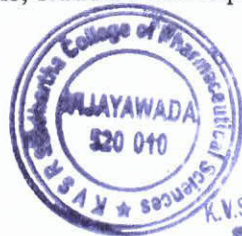

Topics covered:

Introduction to statistical process thinking
Basic statistics
Statistical process control chart
Process capability study
Analysis of variance
Correlation regression analysis

Outcomes of the program:

Upon completion of this Programme, students will expertise in the following:

statistical process thinking
Basic statistics
Statistical process control chart
Process capability study
Analysis of variance
Correlation regression analysis

Program Objectives

To acquire skills to fill gap between the theoretical knowledge and practical approach

To gain knowledge on handling, operating different analytical instruments like HPLC, UV-VIS Spectrophotometer, FTIR, Refractometer

To train students to execute ideas on instrumental analysis and creating environment for research-oriented approach

To encourage students, execute their knowledge on practical approach in industries for betterment of our pharmaceutical industrial growth

Skill development program, for IV/IV B. Pharmacy VII Sem, titled “**Training On Sophisticated Analytical Instruments**” was inaugurated by Dr. **G. Devala Rao** principal & Head Dept. of. Pharmaceutical Analysis, KVSR Siddhartha College of Pharmaceutical Sciences. This program was scheduled from 23-09-2019 to 26-10-2019

The faculty coordinators presented the program schedule, day wise classes and list of instruments of different models and makes, This Training Program was intended to provide basic understanding, operation, and hands on training for Analytical instruments like High Performance Liquid Chromatography (HPLC), Fourier Transform Infrared Spectrophotometer (FT-IR), UV-Vis Spectrophotometer, refractometer, Nephelo -Turbidity meter, Spectro-Fluorimetry, Flame Photometer.

Date 25-09-2019 & 26-09-2019: theory and practice on UV-Visible spectrophotometer

Dr. I. Madhusudhana Reddy, Associate professor, Dept of pharmaceutical analysis, explained UV-Vis Spectrophotometer. Working and principle of the instrument which is a make of Lab India and model UV 3200 with the software UV-Vis analyst. Handling of the cuvettes, UV instrumentation which includes the Sources of light, Wavelength regions and selection of wavelength, types of monochromators used and the detectors used in UV-Vis spectrophotometer like Photo cells, Barrier layer cells and Photo multiplier cells were explained. Different methods of measurement like Fixed point measurement and multiple wavelength determination, and different other methods were also very clearly explained.

Date 27-09-2019 & 28-09-2019: IR Instrumentation, FT-IR Explanation, and application

Dr M Vijayalakshmi, Associate professor, Kvsrscops took charge in explaining FT-IR theory, software learning, sample analysis, applications

The theory involved in the InfraRed radiation sources and the concept of wave number, different vibrational modes in IR region, the FT-IR working principle were explained.

Instrumentation of FT-IR in our college it is made of BRUKER and model Alpha-II with OPUS software. Different sampling techniques like pressed pellet technique, ATR Attenuated total internal reflection for solid, fluid, and polymer analysis, solid samples with KBR and the liquid

Date 14-10-2019 & 15-10-2019: HPLC theoretical training

Dr. G. Devala Rao principal & Head Dept. of Pharmaceutical Analysis explained HPLC of make Shimadzu and model SPD 10A UP, With software LC Solutions. Theory involved in the HPLC were explained in detail with PPT presentation.

Concept of Adsorption and partition, isocratic elution and gradient elution modes, normal phase and reverse phase theory, and instrumentation involved in the HPLC were explained.

Pumping systems and types like pneumatic pumps, syringe type pumps, reciprocating pumps, and piston pumps were explained. Different types of mobile phases to be used. Selection of mobile phase composition based on polarity of solvent, selection of buffer and buffer pH based on sample pKa were clearly explained. Different types of injectors and different types of detectors like UV-VIS, Fluorescence, refractive index detector, elsd, conductivity detectors, mass spectroscopic detectors were taught.

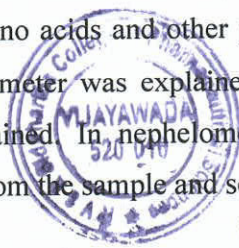

Date 16-10-2019 & 17-10-2019: HPLC practical approach

Practical approach is carried by doing calibration of HPLC for various parameters like wavelength, run time, column temperature and pumping system etc. late calibration is done by using caffeine as a drug. Late sample analysis with paracetamol is shown. The integration of the chromatogram and the various parameters like retention time, theoretical plate, tailing factor, standard deviation calculation, %RSD calculations, mean, Y-Intercept concepts were explained. Trouble shooting for HPLC is also explained which covered the filtration of the mobile phase and sample solutions, the seal wash and the needle wash, pressure maintenance, purging with hot water about 60 C to wash out all the salts and remains in pump.

Washing the channels with magic solution which is combination of Acetonitrile, methanol, and IPA.

Date 18-10-2019 & 19-10-2019: Refractometer and Nephelo-turbidity meter

Mrs. V Anusha, Assistant Professor, Department of pharmaceutical analysis Refractometer theory, instrumentation and sample analysis were done on day 6. The theory of refraction of light, refraction for different media, Snell's law, refractive index calculations, standard refractive index values were learned. Refractometer of make Systronics with different lens is shown. The sample analysis by applying amino acids and other plant samples were identified using refractometer. Later Nephelo-turbidity meter was explained. Here the concept of light scattering and light transmission was explained. In nephelometer the light scattering was measured and it is in 90 to the light passing from the sample and source where in turbidity meter

the light transmitted was measured which is 180 angles to the emitted light. Nephelometer is used for the determination of low viscous and dilute solutions while the turbidity meter is used for the measurement of highly viscous and turbid solutions.

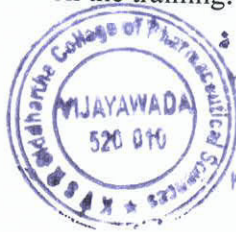

Date 21-10-2019 & 22-10-2019: spectrofluorometer and flame photo meter

Mrs. V Anusha, Assistant professor, Dept. of Pharmaceutical Analysis, Kvsrscops explained Fluorescence, phosphorescence, and the theory of electronic transitions and the instrumentation of fluorimetry, the factors effecting fluorescence and the sample analysis were explained and applied in the instrument. fluorescent compounds, quenching of the fluorescence and the sample quinine analysis is done using fluorimetry.

Flame photometry, the theory behind it, intensity of flame, the change in the fame color due to presence of metal ions in different concentrations. Software learning and the sample analysis by estimating the concentration of unknown sample by calibration curve method against the known standard solutions.

Date 26-10-2019: valedictory function

The workshop got very good response. The valedictory function was inaugurated by **Dr. Karuna Sree Varicola** Associate professor, HOD, Department of Pharmacognosy, KVSRSOPS made a speech about the need for the research blessing the students for the bright future. She addressed about the need of chemical analysis of new products and the advances analytical instruments have made in these years and how much important it is to correlate the theoretical knowledge of these instruments with their practical handling. She distributed the certificates for the students who shown best performance in the training considering the attendance and the results of the exams conducted on the training.
