## PROGRAMME REPORT

### Day 1: OECD GUIDELINES

OECD stands for organisation for economic co-operation and development. The mission of Organisation for Economic Co-operation and development is to promote policies that will improve the economic and social well-being of people around the world. Works with governments to understand what drives economic, social, and environmental change. Set international standards on a wide range of things from agricultural and tax to the safety of the chemicals.

### DAY 2-4 : HISTORY OF ANIMAL TESTING

Animal testing, also known as animal experimentation, animal research, and *in vivo* testing, is the use of non-human animals in experiments that seek to control the variables that affect the behaviour or biological system under study. This approach can be contrasted with field studies in which animals are observed in their natural environments or habitats. Experimental research with animals is usually conducted in universities, medical schools, pharmaceutical companies, defence establishments, and commercial facilities that provide animal-testing services to the industry. The focus of animal testing varies on a continuum from pure research, focusing on developing fundamental knowledge of an organism, to applied research, which may focus on answering some questions of great practical importance, such as finding a cure for a disease. Examples of applied research include testing disease treatments, breeding, defence research, and toxicology, including cosmetics testing. In education, animal testing is sometimes a component of biology or psychology courses. The practice is regulated to varying degrees in different countries.

The earliest references to animal testing are found in the writings of the Greeks in the 2nd and 4th centuries BCE. Aristotle and Erasistratus were among the first to perform experiments on living animals. Galen, a 2nd-century Roman physician, performed *post-mortem* dissections of pigs and goats.<sup>1</sup> Avenzoar, a 12th-century Arabic physician in Moorish Spain introduced an experimental method of testing surgical procedures before applying them to human patients.

## **DAY 5-6 : CPCSEA GUIDELINES**

The aim of the "Committee for the Purpose of Control and Supervision on Experiments on Animals" (CPCSEA) Guidelines is to promote the humane care of animals used in biomedical and behavioural research, and testing with the basic objective of providing specifications that will enhance animal well-being, quality in the pursuit of advancement of biological knowledge that is relevant to humans and animals. In India, a huge number of animals are used for conducting various experiments and researches. 'Good Laboratory Practices' (GLP) for animal facilities is intended to assure quality maintenance and safety of animals used in laboratory studies while conducting biomedical and behavioural research, and testing of products.

Hence, for proper and humanitarian use of animals in various experiments and researches, the Government of India on December 15, 1998 has constituted the CPCSEA under the 'Ministry of Social Justice & Empowerment'.

It is expected that research scientists use this document as the baseline information to follow procedures in their experiments involving various species of animals.

## **DAY 7-9 : DRAFTING OF FORM.D IN CONDUCTING EXPERIMENTS**

Application to be submitted to the CPCSEA, New Delhi after approval of Institutional Animal Ethics Committee (IAEC).

It contains section 1 and section 2

Section 1 has Name and address of establishment, Registration number and date of registration. Name, address and registration number of breeder from which animals acquired (or to be acquired) for experiments mentioned in parts B & C, Place where the animals are presently kept (or proposed to be kept), Place where the experiment is to be performed (Please provide CPCSEA Reg. Number), Date and Duration of experiment.

Section 2:

Handwritten signature and stamp of the Principal, K.V.S. R. Siddhartha College of Pharmaceutical Sciences, Vijayawada. The stamp includes the text "PRINCIPAL", "K.V.S. R. SIDDHARTHA COLLEGE OF PHARMACEUTICAL SCIENCES", and "VIJAYAWADA-520 010".

Protocol form for research proposals to be submitted to the Institutional Animal Ethics Committee/ CPCSEA, for new experiments or extensions of ongoing experiments using animals.

### **DAY 10-12 : EXPERIMENTAL RESEARCH TECHNIQUES IN NEURO-PHARMACOLOGY**

Neuropharmacology is the study of the effects of drugs on the nervous system, with the goal of developing compounds that offer therapeutic benefit in humans with psychiatric and neurological disease. We believe that an understanding of a drug's action requires an integrated knowledge of the cellular and molecular mechanisms by which the drug exerts its effects upon brain circuitry and ultimately human behaviour.

Consequently, the research conducted within the department encompasses many aspects of modern molecular and cellular neuroscience taking full advantage of modern research techniques such as opto-genetics, high-resolution cellular imaging, STEM cell biology and electrophysiology.

#### **OPTO-GENETICS:**

**optogenetics**, experimental method in biological research involving the combination of optics and genetics in technologies that are designed to control (by eliciting or inhibiting) well-defined events in cells of living animal tissue.

#### **HIGH RESOLUTION CELLULAR ENGINEERING:**

The cellular engineering is mainly associated with the modifications and alterations of host cells for enhancing the yield and quality of the expressed protein. There are several approaches for altering the cellular processes such as silencing or overexpressing of targeted genes and altering expression of genes using microRNA (miRNA).

### **DAY 13-14 : INTERNATIONAL GUIDELINES IN FUNDING OPPORTUNITIES**

A grant is awarded based on a proposal made by an applicant to the contracting authority (usually in the frame of a call for proposals). The action to be covered by the grant must be clearly defined by the applicant in their proposal. Once the grant is awarded, the applicant becomes the grant beneficiary, is responsible for the implementation of action and its own results.

#### **MODES OF MANAGEMENT:**

PRINCIPAL  
K.V.S.R. BIDDHARTHA COLLEGE OF  
PHARMACEUTICAL SCIENCES  
VILVANKADA-520 818

## Direct management

When we directly manage grants, we fill the role of the contracting authority, which means that we are responsible for the entire award procedure, from the publishing of calls for proposals to the award decisions, signing of the grant contracts, and monitoring of their implementation.

Calls for proposals and grants under direct management are subject to the prior publication of a related work programme.

## Indirect management

Indirect grant management means that we have concluded a financing agreement with a third party (for example, the government of a partner country) which fills the role of the contracting authority, while we perform prior authorisation controls of the main steps of the procedure.

In most cases, the contracting authority must submit to us the details of the proposed grants and, where required, the draft grant contracts for endorsement. They also need to notify us once grant contracts are signed.

In exceptional cases, the contracting authority does not need prior authorisation from us to award a grant.

Pumping systems and types like pneumatic pumps, syringe type pumps, reciprocating pumps, and piston pumps were explained. Different types of mobile phases to be used. Selection of mobile phase composition based on polarity of solvent, selection of buffer and buffer pH based on sample pKa were clearly explained. Different types of injectors and different types of detectors like UV-VIS, Fluorescence, refractive index detector, elsd, conductivity detectors, mass spectroscopic detectors were taught.

Practical approach is carried by doing calibration of HPLC for various parameters like wavelength, run time, column temperature and pumping system etc. late calibration is done by using caffeine as a drug. Late sample analysis with paracetamol is shown. The integration of the chromatogram and the various parameters like retention time, theoretical plate, tailing factor, standard deviation calculation, %RSD calculations, mean, Y-Intercept concepts were explained. Trouble shooting for HPLC is also explained which covered the filtration of the mobile phase and sample solutions, the seal wash and the needle wash, pressure maintenance, purging with hot water about 60 C to wash out all the salts and remains in pump.

Washing the channels with magic solution which is combination of Acetonitrile, methanol, and IPA.

**DATE 06-10-2018: Refractometer**

Mrs. V Anusha, Assistant Professor, Department of pharmaceutical analysis Refractometer theory, instrumentation and sample analysis were done on day 6. The theory of refraction of light, refraction for different media, Snell's law, refractive index calculations, standard refractive index values were learned. Refractometer of make Systronics with different lens is shown. The sample analysis by applying amino acids and other plant samples were identified using refractometer.

**DATE 22-10-2018 & 23-10-2018 & 24-10-2018: IR Instrumentation, theory and practice**

Dr. I. Madhusudhana Reddy, Associate professor, Kvsrsops took charge in explaining FT-IR theory, software learning, sample analysis, applications

The theory involved in the InfraRed radiation sources and the concept of wave number, different vibrational modes in IR region, the FI-IR working principle were explained.

Instrumentation of FT-IR in our college it is made of BRUKER and model Alpha-II with OPUS software. Different sampling techniques like pressed pellet technique, ATR Attenuated total internal reflection for solid, fluid, and polymer analysis, solid samples with KBR and the liquid

sample analysis were done. Opus soft ware operation, the sample analysis, integration, internal qualification of the system and maintenance of the instrument were explained

**DATE 25-10-2018: Nephelo-turbidity meter**

Nephelo-turbidity meter was explained. Here the concept of light scattering and light transmission was explained. In nephelometer the light scattering was measured and it is in 90 to the light passing from the sample and source where in turbidity meter the light transmitted was measured which is 180 angles to the emitted light. Nephelometer is used for the determination of low viscous and dilute solutions while the turbidity meter is used for the measurement of highly viscous and turbid solutions.

**DATE 26-10-2018 & 27-10-2018: spectrofluorometer and flame photo meter**

Fluorescence, phosphorescence, and the theory of electronic transitions and the instrumentation of fluorimetry, the factors effecting fluorescence and the sample analysis were explained and applied in the instrument. fluorescent compounds, quenching of the fluorescence and the sample quinine analysis is done using fluorimetry.

Flame photometry, the theory behind it, intensity of flame, the change in the fame color due to presence of metal ions in different concentrations. Software learning and the sample analysis by estimating the concentration of unknown sample by calibration curve method against the known standard solutions.

**DATE 31-10-2018: valedictory function**

The valedictory function was inaugurated by **Dr. Ghanta Vijaya kumar**, HOD, Dept of Pharmacology, made a speech about the need for the research blessing the students for the bright future. She addressed about the need of chemical analysis of new products and the advances analytical instruments have made in these years and how much important it is to correlate the theoretical knowledge of these instruments with their practical handling. He distributed the certificates for the students who shown best performance in the training considering the attendance and the results of the exams conducted on the training.
