Program Objectives

To gain knowledge on handling, operating different analytical instruments like HPLC, UV-VIS Spectrophotometer, FTIR, Refractometer

To acquire skills to fill gap between the theoretical knowledge and practical approach

To train students to execute ideas on instrumental analysis and creating environment for research-oriented approach

To encourage students, execute their knowledge on practical approach in industries for betterment of our pharmaceutical industrial growth

Venue: Central Instrumentation Room-Pharmaceutical Analysis Lab and Pharmaceutics Lab

Objectives: To train them

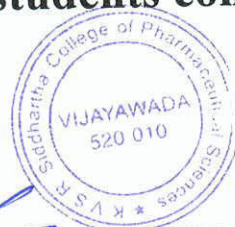

- In handling analytical instruments
- To acquire Knowledge on theory and its practical application
- Sample application, research proposal and study.

Outcomes: Students can

- Handle UV-Vis Spectrophotometer, FT-IR, HPLC, Flame photometer etc.
- Have firm foundation on basics
- Interpretation of data
- Perform practical analysis of samples
- Study on need for current research aspects

Report

Date 08-12-2017 & 09-12-2017: Inauguration function and Analytical Instruments theoretical explanation and importance
Skill development program, for II/IV B. Pharmacy IV sem students, titled “**Instrumental Learning: Practical Approach**” from 08-12-2017 to 23-12-2017” was inaugurated by Dr. G. Devala Rao principal & Head Dept. of Pharmaceutical Analysis, KVSR Siddhartha College of Pharmaceutical Sciences.

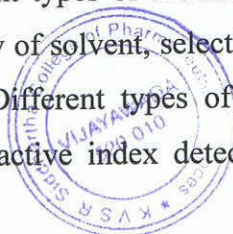

This Training Program was intended to provide basic understanding, operation, and hands on training for Analytical instruments like High Performance Liquid Chromatography (HPLC), Fourier Transform Infrared Spectrophotometer (FT-IR), UV-Vis Spectrophotometer, refractometer, Nephelo -Turbidity meter, Spectro-Fluorimetry, Flame Photometer.

Date 11-12-2017 & 12-12-2017: UV-Visible spectrophotometer, Practical Application
Dr M Vijayalakshmi, Associate professor, Dept of pharmaceutical analysis, explained UV-Vis Spectrophotometer. Working and principle of the instrument which is a make of Lab India and model UV 3200 with the software UV-Vis analyst. Handling of the cuvetts, UV instrumentation which includes the Sources of light, Wavelength regions and selection of wavelength, types of monochromators used and the detectors used in UV-Vis spectrophotometer like Photo cells, Barrier layer cells and Photo multiplier cells were explained. Different methods of measurement like Fixed point measurement and multiple wavelength determination, and different other methods were also very clearly explained.

Date 13-12-2017: HPLC theoretical training
Dr. G. Devala Rao principal & Head Dept. of Pharmaceutical Analysis explained HPLC of make Shimadzu and model SPD 10A UP, With software LC Solutions. Theory involved in the HPLC were explained in detail with PPT presentation.

Concept of Adsorption and partition, isocratic elution and gradient elution modes, normal phase and reverse phase theory, and instrumentation involved in the HPLC were explained.

Pumping systems and types like pneumatic pumps, syringe type pumps, reciprocating pumps, and piston pumps were explained. Different types of mobile phases to be used. Selection of mobile phase composition based on polarity of solvent, selection of buffer and buffer pH based on sample pKa were clearly explained. Different types of injectors and different types of detectors like UV-VIS, Fluorescence, refractive index detector, elsd, conductivity detectors, mass spectroscopic detectors were taught.

Date 14-12-2017 & 15-12-2017: HPLC practical approach

Practical approach is carried by doing calibration of HPLC for various parameters like wavelength, run time, column temperature and pumping system etc. late calibration is done by using caffeine as a drug. Late sample analysis with paracetamol is shown. The integration of the chromatogram and the various parameters like retention time, theoretical plate, tailing factor, standard deviation calculation, %RSD calculations, mean, Y-Intercept concepts were explained. Trouble shooting for HPLC is also explained which covered the filtration of the mobile phase and sample solutions, the seal wash and the needle wash, pressure maintenance, purging with hot water about 60 C to wash out all the salts and remains in pump.

Washing the channels with magic solution which is combination of Acetonitrile, methanol, and IPA.

Date 16-12-2017 & 18-12-2017: IR Instrumentation, theory, and practice

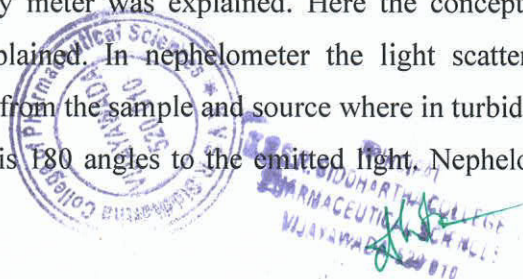

Dr. I. Madhusudhana Reddy, Associate professor, Kvsrscops took charge in explaining FT-IR theory, software learning, sample analysis, applications

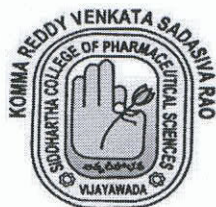

The theory involved in the InfraRed radiation sources and the concept of wave number, different vibrational modes in IR region, the FI-IR working principle were explained.

Instrumentation of FT-IR in our college it is made of BRUKER and model Alpha-II with OPUS software. Different sampling techniques like pressed pellet technique, ATR Attenuated total internal reflection for solid, fluid, and polymer analysis, solid samples with KBR and the liquid sample analysis were done. Opus soft ware operation, the sample analysis, integration, internal qualification of the system and maintenance of the instrument were explained.

Date 19-12-2017 & 20-12-2017: Refractometer and Nephelo-turbidity meter

Mrs. V Anusha, Assistant Professor, Department of pharmaceutical analysis Refractometer theory, instrumentation and sample analysis were done on day 6. The theory of refraction of light, refraction for different media, Snell's law, refractive index calculations, standard refractive index values were learned. Refractometer of make Systronics with different lens is shown. The sample analysis by applying amino acids and other plant samples were identified using refractometer. Later Nephelo-turbidity meter was explained. Here the concept of light scattering and light transmission was explained. In nephelometer the light scattering was measured and it is in 90 to the light passing from the sample and source where in turbidity meter the light transmitted was measured which is 180 angles to the emitted light. Nephelometer is

used for the determination of low viscous and dilute solutions while the turbidity meter is used for the measurement of highly viscous and turbid solutions.

Date 21-12-2017 : Spectrofluorometer

Fluorescence, phosphorescence, and the theory of electronic transitions and the instrumentation of fluorimetry, the factors effecting fluorescence and the sample analysis were explained and applied in the instrument. fluorescent compounds, quenching of the fluorescence and the sample quinine analysis is done using fluorimetry.

Date 22-12-2017: Flame photo meter

Flame photometry, the theory behind it, intensity of flame, the change in the flame color due to presence of metal ions in different concentrations. Software learning and the sample analysis by estimating the concentration of unknown sample by calibration curve method against the known standard solutions.

Date 23-12-2017: Valedictory function

The workshop got very good response. The valedictory function was inaugurated by **Dr. B. Anupama**, HOD, Dept of Pharmaceutical Chemistry, made a speech about the need for the research blessing the students for the bright future. She addressed about the need of chemical analysis of new products and the advances analytical instruments have made in these years and how much important it is to correlate the theoretical knowledge of these instruments with their practical handling. she distributed the certificates for the students who shown best performance in the training considering the attendance and the results of the exams conducted on the training.

PROGRAM REPORT

Name of the event: Skill development programme on “APPLICATION OF 4R’S IN ALTERNATIVE TO ANIMAL TESTING”

Dates: 1-12-17 to 16-12-17

Resource person:

Dr.Nagabhushanam

Assistant Professor, Department of Pharmacology,
KVSr Siddhartha College of Pharmaceutical Sciences, Vijayawada
Email id: chnb137@gmail.com
Contact number: 9951067030

Name of the coordinator: Dr.G. Devala rao

Organizing Secretary: Dr.G.Vijaya Kumar

Number of students attended: 108

Venue: Pharmacology lab, classroom

Objective of the program:

To make students gain knowledge on Application of 4 R’S in alternatives to animal testing

Topics covered:

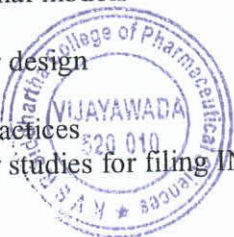

Alternatives to animal models
Principles of 4 R’s
Experimental study design
Writing a protocol
Good laboratory practices
Regulatory toxicity studies for filing IND

Outcomes of the program:

Upon completion of this Programme, students will expertise in the following:

Alternatives to animal models
Principles of 4 R’s
Experimental study design
Writing a protocol
Good laboratory practices
Regulatory toxicity studies for filing IND

DETAILED ACTIVITIES

DAY 1-2 : Alternative to animal models:

The number of animals used in research has increased with the advancement of research and development in medical technology. Every year, millions of experimental animals are used all over the world.

The pain, distress and death experienced by the animals during scientific experiments have been a debating issue for a long time. Besides the major concern of ethics, there are few more disadvantages of animal experimentation like requirement of skilled manpower, time consuming protocols and high cost.

Various alternatives to animal testing were proposed to overcome the drawbacks associated with animal experiments and avoid the unethical procedures. A strategy of 3 Rs (i. e. reduction, refinement and replacement) is being applied for laboratory use of animals. Different methods and alternative organisms are applied to implement this strategy.

These methods provide an alternative means for the drug and chemicals testing, up to some levels. An integrated application of these approaches would give an insight in to minimum use of animals in scientific experiments.

DAY 3-5 : PRINCIPLES OF 4 R'S

The principles of the 3Rs (*Replacement, Refinement and Reduction*) were developed over 50 years ago by W.M.S. Russell and R.L. Burch, as a framework for humane animal research.

- **Replace** animal experiments with alternative methods when possible
- **Refine** methods and procedures so that pain and discomfort are avoided
- **Reduce** the number of animals used

Today the 3Rs are increasingly seen as a framework for conducting high quality science in the academic world with more focus on developing alternative approaches which avoid the use of animals.

Replacement

Replacement refers to technologies or approaches which directly replace or avoid the use of animals in experiments where they would otherwise have been used.

For many years research animals have been used to answer important scientific questions including those related to human health. Animal models are often costly and time-consuming and depending on the research question present scientific limitations, such as poor relevance to human biology. Alternative models can address some of these concerns. In the last decade

Pharmaceutical Sciences

or so, advances in science and technology have meant that there are now realistic opportunities to replace the use of animals.

Reduction

Reduction refers to methods that minimise the number of animals used per experiment or study consistent with the scientific aims. It is essential for reduction that studies with animals are appropriately designed and analysed to ensure robust and reproducible findings.

Reduction also includes methods which allow the information gathered per animal in an experiment to be maximised in order to reduce the use of additional animals. Examples of this include the use of some imaging modalities which allow longitudinal measurements in the same animal to be taken (rather than for example culling cohorts of animals at specific time points), or micro sampling of blood, where small volumes enable repeat sampling in the same animal. In these scenarios, it is important to ensure that reducing the number of animals used is balanced against any additional suffering that might be caused by their repeated use.

Sharing data and resources (e.g., animals, tissues and equipment) between research groups and organisations can also contribute to reduction.

Refinement:

Refinement refers to methods that minimise the pain, suffering, distress or lasting harm that may be experienced by research animals, and which improve their welfare. Refinement applies to all aspects of animal use, from their housing and husbandry to the scientific procedures performed on them. Examples of refinement include ensuring the animals are provided with housing that allows the expression of species-specific behaviours, using appropriate anaesthesia and analgesia to minimise pain, and training animals to cooperate with procedures to minimise any distress.

Evidence suggests that pain and suffering can alter an animal's behaviour, physiology and immunology. Such changes can lead to variation in experimental results that impairs both the reliability and repeatability of studies.

DAY 6-8 : Experimental Study Design:

Experimental study designs are the primary method for testing the effectiveness of new therapies and other interventions, including innovative drugs. The researchers had adopted experimental methods and other research designs to develop and screen new compounds, improve production outputs, and test drugs for therapeutic benefits.

In pharmacoepidemiology, the primary use of experimental design is in performing clinical trials, most notably randomized, controlled clinical trials.⁴ These studies involve people as the units of analysis. A variation on this experimental design is the community intervention study, in which groups of people, such as whole communities, are the unit of analysis. Key aspects of

trial design. For example, a clinical trial involving daily chronic administration requires repeat-dose toxicity studies in preclinical animal models.

Number of students Completed :30

Venue: Seminar hall , class room No : 401

Topics covered:

1. Chemsketch
2. Chemdraw
3. Chembiodraw

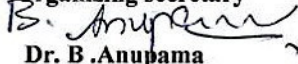

Objectives of the Program:

- ✦ To draw chemical structures
- ✦ To view them as three dimensional (3D) models.
- ✦ It can be used to produce structures of organic molecules, names of organic molecules as well as Lewis structures.
- ✦ ChemDraw is a chemistry software which help us in many chemical structures.
- ✦ It can convert the name of a molecule into its structure an vice versa.

Outcomes of the Programme:

- Centering to impart the fundamentals of CADD techniques .
- Provides the concepts of various softwares used in molecular docking .
- predicting new molecular structures.
- Predicting receptor -ligand interactions .
